Subject: the SE html playbook

Updated version with leadership competencies… we need to further refine the message and also, use the existing + new tracks combo version of SE and Architect… but guess what… we can do this on copilot claude Opus. Have a look.

Regards
Richa

Subject: SE RSP playbook

Hi ladies – my attempt on building the SE playbook using your FRD doc, the SE RSP and the communication message note we created for internal comms.

Regards
Richa

Subject: Fw: Claude assistance - RSP Playbook FRD V1

Hi ,

Sharing the RSP Playbook FRD initial version for reference:
I have had a word with Siddharth on screenshot and html sample expectations. Once he confirms, will add those and share the updated one.

Note: I will be offline this afternoon. On my way to the office, a treated water hose for gardening was left unattended by the UST gardening team, splashing water all over me, leaving me completely drenched. As I cannot stay long in this condition, I will be heading back home.

Regards,
RINI A

Subject: Re: Claude assistance

Requirement: Creating a Claude-powered HTML-based RSP Skills Playbook as a pre-launch engagement layer for Talent Hub, along with future integration ideas.

Details:

1. Create a standalone HTML Skills Playbook

- A standalone HTML experience should be built before Talent Hub launch, planned in August.
- Purpose is to create awareness and excitement about changing roles, career tracks and skills.
- It is intended as an informational experience, not an assessment platform.

2. Follow the 5D Career Development Model

The landing experience should be based on:

- Discover
- Design
- Diagnose
- Develop
- Demonstrate

The landing page should explain:

- Career growth philosophy
- Impact of skills evolution
- Why employees should engage with Talent Hub and RSPs

3. Role Family Exploration

Users should be able to:

- Select a role family (Software Engineering, Quality Engineering, Enterprise Solutions, etc.)
- Explore information related to that role family

- Navigate across role families freely

The initial solution should **not** just compare the current role vs aspirational role. It should primarily allow skill exploration.

4. Show Future Evolution of Roles

For each role family:

- Display current architecture vs future architecture
- Show how job tracks are evolving
- Highlight new career opportunities and role expansion
- Include visual diagrams of career progression tracks

Example:

- Software Engineering architect track expanding beyond current levels into higher individual contributor roles.

5. Band and Grade Based View

Employees should be able to:

- Select Band/Grade
- View expectations for higher levels as well
- Explore skills across grades

Visibility should not be restricted to the employee's current grade.

6. Specialization-Based Navigation

After choosing a role family, users should be able to select:

1. Band & Grade, Specialization, Primary Skill Group or example tracks like: Front-End, Back-End, Full Stack, Architect tracks

Content should dynamically change based on selections.

7. Display RSP Skills in a User-Friendly Format

Convert RSP spreadsheets into an intuitive visual experience.

The system should show:

- Skill Groups
- Skills under each group
- Expected proficiency level
- Skill descriptions

The current Excel structure is considered unsuitable for direct employee consumption and needs a more intuitive presentation.

8. Provide Claude-Generated Skill Intelligence

Use Claude to enhance RSP content with:

- Skill explanations

- Definitions
- Additional context
- Emerging and evolving skill information

9. Categorize Skills Visually

A proposed structure included:

- Technical Skills
- Leadership Skills

Within each category:

- Skill Groups
- Individual Skills
- Required proficiency levels

Visual representation preferred over spreadsheet-like tables.

10. Read-Only Information Model

The HTML solution should:

- Not perform assessments
- Not capture ratings
- Not identify skill gaps
- Not update employee profiles

Its purpose is awareness and education. All assessments remain in Talent Hub.

11. No CV Integration in Claude Solution

The HTML solution should:

- Not store CVs
- Not process CVs
- Not perform gap analysis

Reasons:

- Avoid duplication of Talent Hub functionality
- Reduce security and data management concerns
- Keep assessment activities inside Talent Hub only.

12. Link to Talent Hub

The HTML solution should:

- Guide employees towards Talent Hub
- Act as the engagement layer
- Become an entry point encouraging:
  - CV updates
  - Skill validation
  - Manager validation
  - Future career planning activities

13. No SSO Requirement

Initial version should:

- Be accessible without SSO integration
- Be role-agnostic
- Allow any employee to explore any track.

14. Future Talent Hub Integration Roadmap

Longer-term requirements:

- Workday integration
- Skill adjacencies
- Career adjacencies
- Cross-role exploration

Regards,
RINI A
